Projects

Github link: <https://github.com/DevMarkLights>

Kiro Clothing (December 2022 - Present)

Link to website: <https://cohesive-mile-381420.uc.r.appspot.com/>

Ecommerce clothing website using React.js for frontend. Backend: node.js, express.js, and MongoDB. Uses stripe for payment processing. Website has a landing screen, shop page, cart page, and successful order page. Has a Dashboard for the owner of the website to handle orders and inventory.

Lights Finance (August 2021 - May 2022)

Light Finance is a dividend calculator app that supports the way you invest. Whether it be risky, conservative or right in the middle. It provides you with future analysis for your stock portfolio and recommends similar stocks. Shows your sector diversification and calculates your monthly dividend.

Video Shoppe (August 2019 - April 2020)

This was a team project and we used layered architecture. We used SCRUM and agile methodologies .We created an information system to store and retrieve dvd, customer, and clerk information.

Experience
